## PROJECTS

**Design and Development of a Mobile-Based Outsourcing Information System Using the Flutter Framework**  
The system allows outsourcing clients to search and order services more efficiently, providing a payment solution through a payment gateway to streamline transactions via the application. The system is built using the Software Development Life Cycle (SDLC) with a waterfall model. The system utilizes Go technology as the backend service, Flutter for creating the client application, and MySQL as the DBMS. [Github](#)

**Retail Application**  
The system is used to streamline the ordering process for goods from retail customers and then manage the stock for each retail customer. The system uses Laravel as the backend framework, Flutter for developing the client application, and MySQL as the DBMS. [Github](#)
